

PAT-Forage International is a specialist drilling company incorporated in France and affiliated with companies in Cameroon, Thailand, and the United States of America.

Our partners have over thirty years drilling experience in Africa, Asia, Europe, and Latin America working in association with private companies, NGOs, and government agencies.

We specialize in emergency water drilling in conflict zones and remote rural development work.

PAT-Forage International provides the following services:

- Drilling and equipping water wells
- Sales of drilling equipment and material
- Training of drilling crews
- Technical Assistance
- Repairs and maintenance of equipment
- Anchorage drilling
- Geotechnical drilling
- Geothermal drilling.

PROMOTING APPROPRIATE TECHNOLOGIES

PAT-Forage International uses PAT [Promotion of Appropriate Technology]-Drill rigs. These machines, manufactured in Bangkok, are designed as compact and highly efficient equipment for drilling in remote and difficult situations. PAT-Drills are renowned for their low cost, simplicity of design, and ease of operation. PAT-Drill machines are revolutionizing water well drilling in conflict zones and in poor rural areas, demonstrating that significant results can be delivered for minimal investment. The PAT-Drill 301TP, our main unit, is a trailer-mounted machine that can drill to depths of 140 m in all kinds of terrain. It is the ideal machine for supplying water to rural villages as well as schools, clinics, and refugee camps.

RESPONDING TO EMERGENCIES

Since 2004 **PAT-Forage International** has been active in response to the Darfur crisis in Sudan, drilling water wells, training operators, and providing technical assistance to aid agencies.

PROMOTING SUSTAINABLE DEVELOPMENT

PAT-Forage International is committed not only to building productive water wells, but to fostering a productive and sustainable water drilling industry in developing countries. The

central challenge in meeting this goal is building capacity. At PAT-Forage International we have the experience and technical capacity to train local drill operators with the skills needed for scaling-up drilling operations in remote areas.
